1. Claims 6, 9 and 10 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. There is nothing in the specification to indicate that a plurality of solids is intended for the claimed composition or that applicants had possession of such a concept. The specification only refers to the solvent use in the singular. This limitation is considered to be new matter.

2. Claims 9 and 10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Similar to that noted in the previous office action, reference to "the plurality of evaporable solvents" lacks antecedent basis since a plurality of solvents is not found in claim 1.

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

4. Claims 1, 2 and 4 to 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ivkovich.

This rejection relies on the rationale of record.

5. Claims 1 to 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sangeeta et al.

This rejection relies on the rationale of record.

6. Applicants' rely on the same rationale in an effort to overcome the rejections of record. As such the Examiner will address these arguments simultaneously. It is argued that "several of the features recited in independent claim 1 or not taught or

suggested” by Sangeeta or Ivkovich. The only feature specifically noted by applicants, though, is the “forming a pliable composition, wherein the composition conforms to and substantially fills a void between the radius region and the skin member”.

To this extent the Examiner notes that both Sangeeta and Ivkovich teach pliable compositions. In Sangeeta note that the composition therein is in the form of a slurry and is used as a coating. In Ivkovich note that this reference, too, teaches a coating composition. Such compositions can be considered to be pliable.

For the requirement of “conforms to and substantially fills a void between the radius region and the skin member” note that this language refers to the future intended use of the composition. While the teachings in the prior art reference need not teach such a specific limitation, the prior art does need to be able to meet this limitation. The coating compositions of the prior art are fluid and thus will conform to a void when placed therein. This limitation on the future intended use of the composition does nothing to render the claimed composition unobvious over those taught by the prior art. As such these rejections are maintained.

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

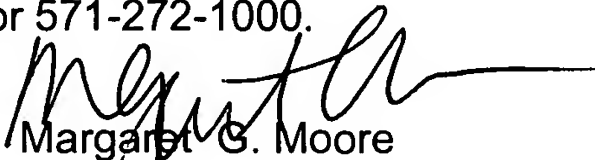

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
